SHREYANSH JOSHI

AI & Data Analytics and Reporting Analyst Co-op | Python | SQL | Data Visualization

Mississauga, Ontario | joshishreyansh20@gmail.com

linkedin.com/in/shreyansh-joshi-a32b32323 | github.com/ShreyanshJoshi4444

PROFESSIONAL SUMMARY

Artificial Intelligence graduate student at Sheridan College with hands-on Python and SQL experience in data cleaning, exploratory analysis, visualization, and machine learning. Build repeatable preprocessing workflows and interactive apps that make model results clear to others. Collaborative developer with experience translating requirements, working across teams, and adapting to new digital tools.

TECHNICAL SKILLS

Data analysis and reporting: Python, SQL, Pandas, NumPy, data cleaning, EDA, feature engineering, Matplotlib, Seaborn, Plotly, Streamlit dashboards

AI and automation: Scikit-Learn, TensorFlow/Keras, PyTorch, model evaluation, hyperparameter tuning, reusable preprocessing pipelines, FastAPI, REST APIs

Web and collaboration: HTML, React, Git, GitHub, Jupyter Notebook, JavaScript, Flutter/Dart

SELECTED PROJECTS

Mental Health Signal — Data Analytics and Prediction App | 2026

Live demo: shreyansh-mental-health-signal.streamlit.app

- Cleaned and explored 5,000 student records; selected social media, study, sleep, activity, and stress features to model a 0–10 score.
- Automated preprocessing with Scikit-Learn ColumnTransformer; compared Linear Regression and Random Forest and tuned models using RandomizedSearchCV.
- Achieved test R^2 of 0.878 and MAE of 0.347 with the selected Random Forest on a 70/30 train/test split; deployed a Streamlit report with live inputs and model statistics plus a FastAPI endpoint.

Emotion Prediction — NLP Analytics and Visualization App | 2026–Present

Live demo: shreyansh-emotion-prediction.streamlit.app

- Prepared 16,000 training examples for six-class text classification and compared Simple RNN, LSTM, GRU, and Bidirectional GRU models; the stacked GRU reached 90.35% accuracy on a 2,000-example split also used for validation.
- Deployed a Streamlit interface presenting live predictions, all six class scores, model statistics, and comparison figures to communicate results clearly.

FallGuard — Real-Time Fall Detection System | 2026

- Built a Python/PyTorch pipeline using pose features from 1,000+ labeled video clips; addressed class imbalance and evaluated subject-level splits and cross-dataset generalization.
- Served real-time predictions through FastAPI and built a React/HTML interface with live skeleton overlays and risk scoring.

WORK EXPERIENCE

Sales Associate — The Home Depot, Mississauga, Ontario | Jan 2026–Present

- Assess customer needs, communicate options clearly, and coordinate with colleagues across departments to resolve requests during high-volume periods.
- Use POS and internal transactional systems accurately; recognized as a Loyalty Accelerator for exceeding Consumer Credit Card enrollment targets and generating qualified leads.

Flutter Developer — Mindron, Surat, India | 2023–2024

- Built reusable mobile UI components and integrated REST APIs for data retrieval and parsing; used Git and collaborated with designers and developers to deliver and debug features.

EDUCATION

Postgraduate Diploma, Artificial Intelligence — Sheridan College, Ontario | Jan 2026–Apr 2027

GPA: 3.7/4.0 | Focus: Machine Learning, Data Science, Neural Networks, NLP

Bachelor of Science, Information Technology — Bhagwan Mahavir University, India | 2022–2025

GPA: 9.0/10
